CALL FOR PAPERS / THE FIRST WORKSHOP ON UNIVERSAL JUDGES

Universal Judges (UniJudge)

Reliable Judging Across Languages and Modalities

Co-located with ACM TRUST 2027 / Washington, DC (hybrid) / March 7-9, 2027

AI judges shape model development, safety evaluations and deployment decisions. Their reliability can shift across languages, modalities and representations, even when underlying quality is unchanged.

UniJudge brings together trustworthy AI, evaluation, multilingual NLP, vision, speech and multimodal communities to audit evaluators, compare failure modes and develop shared evaluation protocols.

Topics of interest

Multilingual and low-resource judges

Cross-lingual consistency and transfer, underrepresented languages, code-switching, transliteration and culturally dependent criteria.

Multimodal judges

Image, document, audio, video and interactive outputs; groundedness, hallucination, reasoning and evidence use.

Multilingual-multimodal evaluation

Vision-language and document systems across languages; multilingual speech and audio.

Cross-representation consistency

Translation, modality conversion, formatting, verbosity and ordering; counterfactual and perturbation tests.

Judge auditing and meta-evaluation

Reasoning validity, robustness, bias, calibration and causal faithfulness.

Multi-judge systems

Judge disagreement, ensembles and aggregation.

Benchmarks and protocols

Datasets and evaluation protocols for judges in these settings.

Important dates

Abstract registration	**Dec 11, 2026**
Paper submission	**Dec 18, 2026**
ARR commitment	**Jan 8, 2027**
Acceptance notification	**Jan 22, 2027**
Workshop	**Mar 7-9, 2027**

All deadlines: 11:59 PM AoE

What to submit

We welcome long and short papers, with archival and non-archival options. See the website for page limits, formatting, and submission policies.

Submit directly via OpenReview

Commit an ARR paper
