CALL FOR PAPERS · ACM TRUST 2027 WORKSHOP

Universal Judges (UniJudge)

Reliable Judging Across Languages and Modalities

Washington, DC (hybrid) · March 7–9, 2027 · Full-day workshop

AI judges increasingly benchmark models, select checkpoints, gate safety evaluations and inform deployment decisions, yet most judge methods remain English-only and text-only. **UniJudge** asks whether judge-based evaluation stays reliable as AI systems move across languages, modalities and representations, bringing together trustworthy AI, evaluation, multilingual NLP, vision, speech and multimodal communities.

Topics of interest

- **Multilingual and low-resource judges** — cross-lingual consistency and transfer, underrepresented languages, code-switching, transliteration, culturally dependent criteria
- **Multimodal judges** — judging image, document, audio, video and interactive outputs; groundedness, hallucination and evidence use
- **Multilingual–multimodal evaluation** — vision–language and document systems across languages; speech and audio across languages
- **Cross-representation consistency** — stable verdicts under translation, modality conversion, formatting, verbosity, ordering and reasoning style; counterfactual and perturbation tests
- **Judge auditing and meta-evaluation** — reasoning validity, robustness, bias, calibration and causal faithfulness
- **Multi-judge systems** — judge disagreement, ensembles and aggregation
- **Benchmarks and protocols** — datasets and evaluation protocols for judges in these settings

Important dates

Abstract registration	**Dec 11, 2026**
Full paper submission	**Dec 18, 2026**
Acceptance notification	**Jan 22, 2027**
Workshop	**Mar 7–9, 2027**

Deadlines 11:59 PM AoE

What to submit

Full papers, up to 9 pages

Short papers and extended abstracts, up to 4 pages: position papers, negative results, works in progress

Junior Spotlight Track for students and early-career researchers

ACM sigconf format · double-blind review

Full call, website and submission link

Accepted workshop papers will be considered for publication in the TRUST 2027 conference proceedings. Papers selected for inclusion in the proceedings may undergo an additional light review to determine their suitability for publication.

Organizers Clint Solomon Mathialagan (Oracle), Prerana Rane, Alla Rozovskaya (Queens College, CUNY), Md Nasir (Oracle), Latha Pemula, Ramprasaath R. Selvaraju (Apple)
